

FEATURE >>> PROJECT AL-KHAMSIN - FJ CRUISER

The swingout spare tire carrier is rated to hold up to a 33" tire. Note that if you have a backup camera system on your FJC, the tire on the swingout blocks the camera.

Box is designed to hold three fuel ("jerry") cans for long distance expeditions.

the rear 3/4 panels. The Aluminess bumper has large vertical metal panels to protect these areas from harm, which is great. It's light, carries a 33" tire and

extra fuel, and won't rust: woot! If you don't have a rear camera system or need a hitch, it's definitely good to go out of the box. ✓

The Aluminess bumper is solid. Side panels let you bash the rear end of the truck around in the rocks and pivot around trees, which is why you put on a rear bumper in the first place! That, and to hold a bigger spare tire. The Aluminess bumper handles both duties equally well.
